Omnitracs Roadnet Anywhere

Tracking

### Answer the Question: "Where's my Truck?"

Omnitracs Roadnet Anywhere's key advantages:

- Easy Installation and Setup
- No Additional Hardware required
- Exceptions configured to your business model
- Quick view of all vehicles in last known positions in a map view
- Individual Driver Breadcrumb trail pings with activity and color indicators of events of violated exceptions
- Real-Time Location Info:
  Answer "Where's my Truck?" within seconds

Omnitracs Roadnet Anywhere Tracking is an easy-to-use, web-based tool that provides a real-time view into what is going on during the work day. You'll be alerted if the employee is speeding, stationary too long, or even out of contact so you can react proactively instead of reactively. Access Omnitracs Roadnet Anywhere Tracking from anywhere or at any time, by using your computer, tablet or smartphone. You're always connected to your workforce, not tied to the desk and armed with data to make actionable decisions.

With Omnitracs Roadnet Anywhere Tracking you'll always know your employees work status – on or off duty, where they are and if any exception threshold has been hit. To make it simple to navigate and visualize, these data points are displayed in an easy-to-read map view which includes the last known position.

Need detailed information on a specific driver? No problem. Drill down in real time or look up past activity. Quickly see a breadcrumb trail of GPS pings and exceptions that may have been triggered. Driver status throughout the day is available, and you'll even have a daily timeline that will allow you to playback the day by time of day. Exceptions play a key role in Omnitracs Roadnet Anywhere Tracking – there's no need to watch the screen to see which rules are being bent. These exceptions include: Stationary Too Long, Speeding, Out of Contact, Late GPS and GPS Gaps. They're easily identifiable on the map and route timeline via color-coding. Exceptions are also displayed in their own view to drill down into the details.
